

## ONSET MONITORING AND OUTLOOK BULLETIN

### Monitoring until 11 April 2024

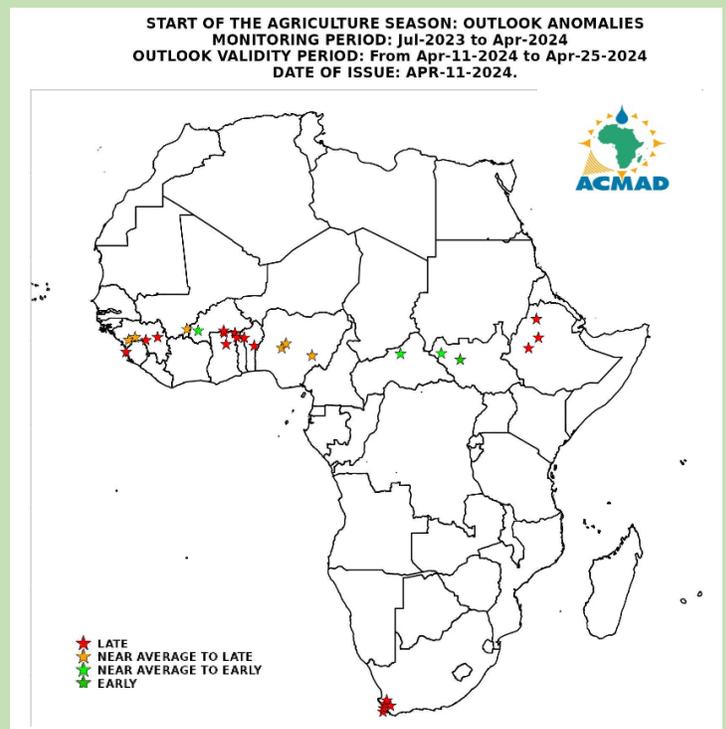

A near-average to late onset of the rainy season has been observed in much of extreme southern and northern African countries, many parts of the central African region, and most of the Gulf of Guinea countries from Liberia to Benin, including southeastern and extreme western Nigeria, as well as southern Cameroon. While southern Nigeria, central Cameroon, and many parts of eastern and northern SADC region have reported an early onset of rainfall.

### Outlook

#### valid from 11 to 25 April 2024

**Late rainfall onset is very likely over much parts of western Africa countries:**

Near-average to late onset of the rainy season is expected over Guinea, Sierra Leone, southwestern Burkina Faso, northern Ghana, Togo, Benin, and western Ethiopia. An early onset of rainfall is likely over northern Central Africa and South Sudan.
