# OUTLINE

**I. ANALYSIS OF CLIMATE VARIABILITY AND TRENDS**

**II. IDENTIFICATION OF ANALOG YEARS**

**III. SELECTION OF WET AND DRY YEARS**

**IV. GLOBAL SST AND PRECIPITATION COMPOSITE ANALYSIS**

**V. ANALYSIS OF CUMULATIVE ESTIMATED PRECIPITATION**

**VI. GENERATION AND ANALYSIS OF STATISTICAL FORECAST WITH CLIMATE PREDICABILITY TOOLS**

**VII. ANALYSIS OF EACH GLOBAL PRODUCING CENTRES FOR LONG RANGE FORECAST**

**VIII. ANALYSIS OF WMO LEAD CENTRES FOR LONG RANGE FORECASTS MULTIMODEL PRODUCTS**

**IX. COMBINATION OF OUTPUTS FROM STEP 1 TO STEP 8 AND GENERATION OF THE CONSENSUS FORECAST**

The latest weekly  
SST departures are:

Niño 4	-0.5°C
Niño 3.4	-0.3°C
Niño 3	-0.4°C
Niño 1+2	0.2°C

# SST Departures ( $^{\circ}\text{C}$ ) in the Tropical Pacific During the Last Four Weeks

In the last four weeks, equatorial SSTs were near-to-below average across most of the equatorial Pacific Ocean, and were above average in the western and far eastern Pacific Ocean.

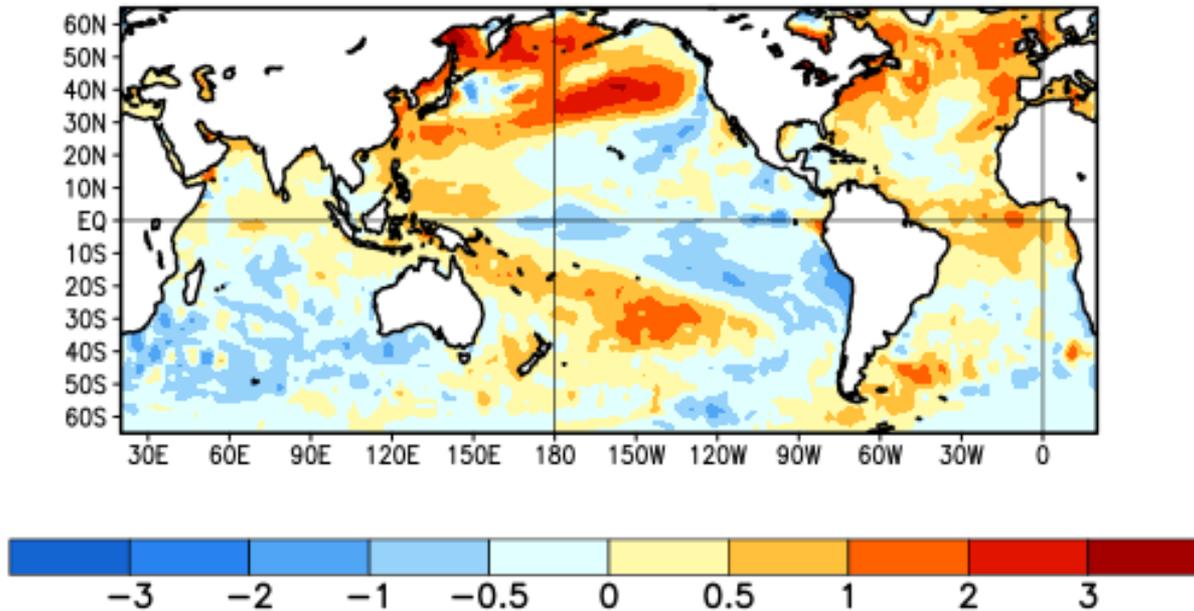

# Global SST Departures (°C) During the Last Four Weeks

During the last four weeks, equatorial SSTs were near-to-below average across most of the equatorial Pacific Ocean. Equatorial SSTs were above average in the western and far eastern Pacific Ocean and Atlantic Ocean.

Average SST Anomalies  
29 AUG 2021 – 25 SEP 2021

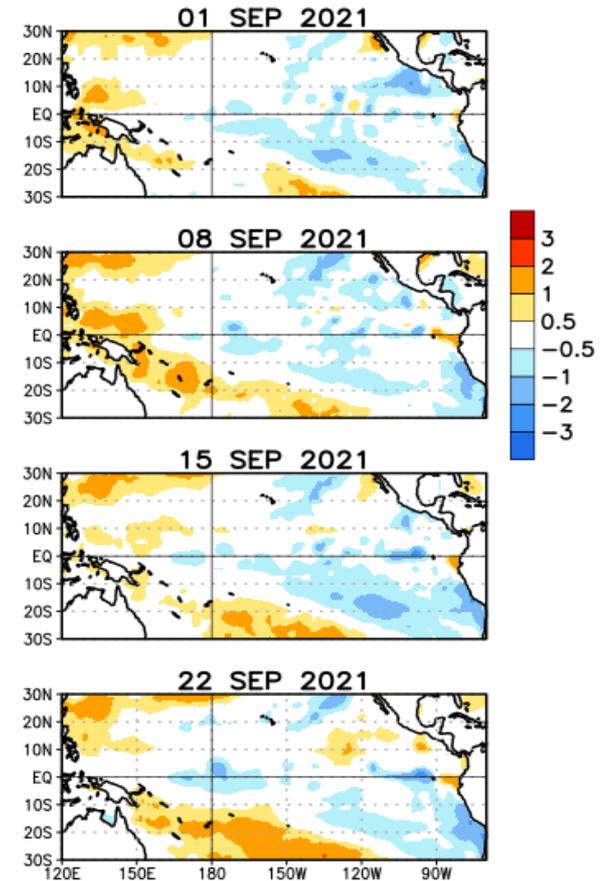

# Weekly SST Departures during the Last Four Weeks

During the last 4 weeks, SSTs have been mostly near-to-below average in the central and east-central Pacific Ocean.

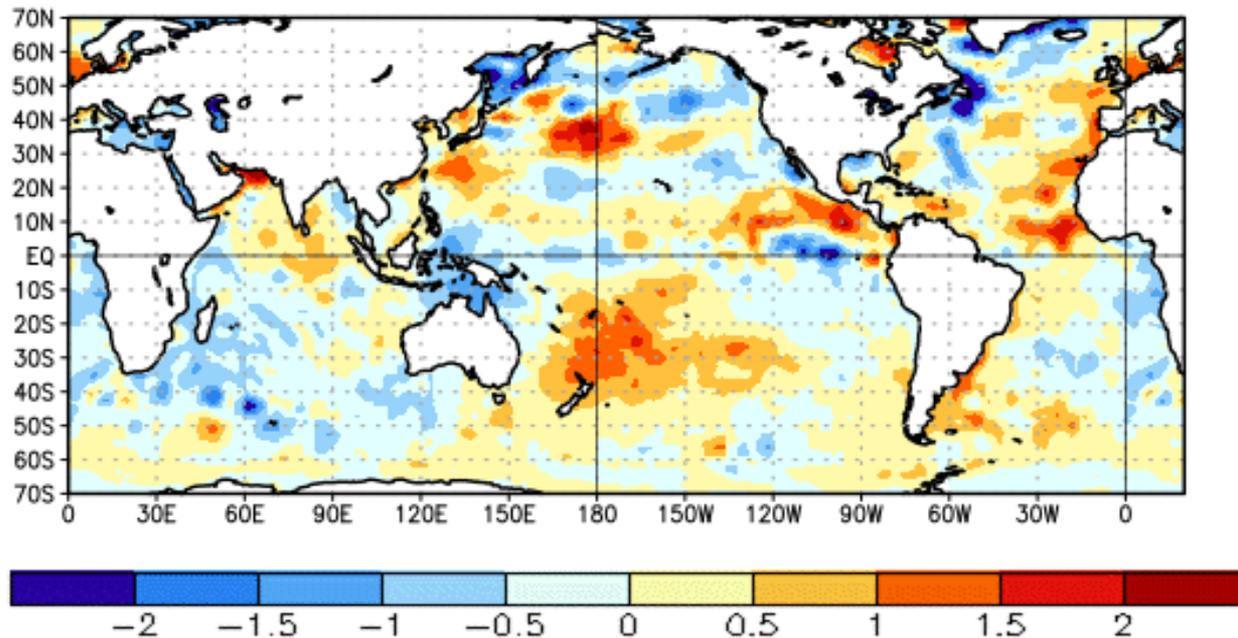

Weekly SST Anomalies (DEG C)

# Change in Weekly SST Departures over the Last Four Weeks

During the last four weeks, the changes in equatorial SST anomalies were mostly negative across the Pacific Ocean.

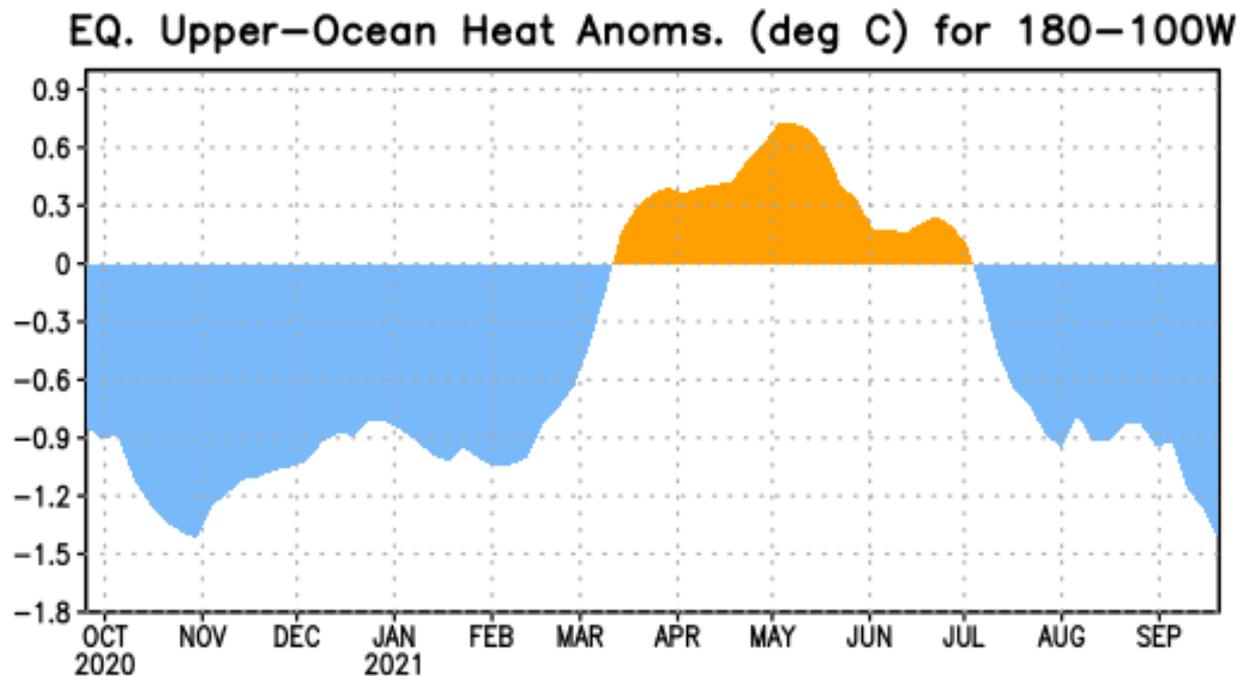

Change in Weekly SST Anoms (°C)  
22SEP2021 minus 25AUG2021

# Central and Eastern Pacific Upper-Ocean (0-300 m) Weekly Average Temperature Anomalies

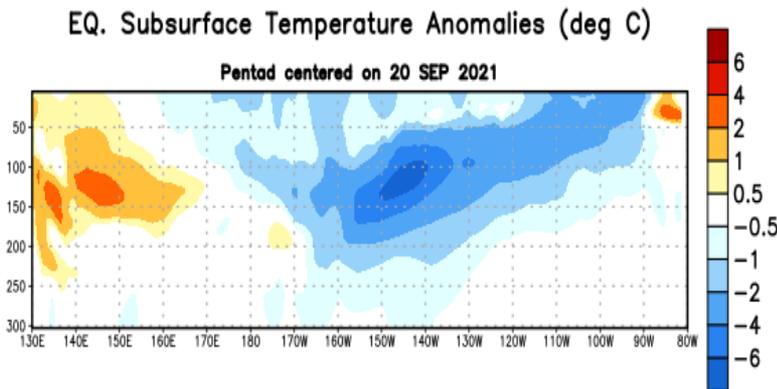

Negative subsurface temperature anomalies persisted into March 2021. From mid-March to early July 2021, subsurface temperature was above average. Since mid-May 2021, positive temperature anomalies have weakened. Negative anomalies strengthened in July and again in September

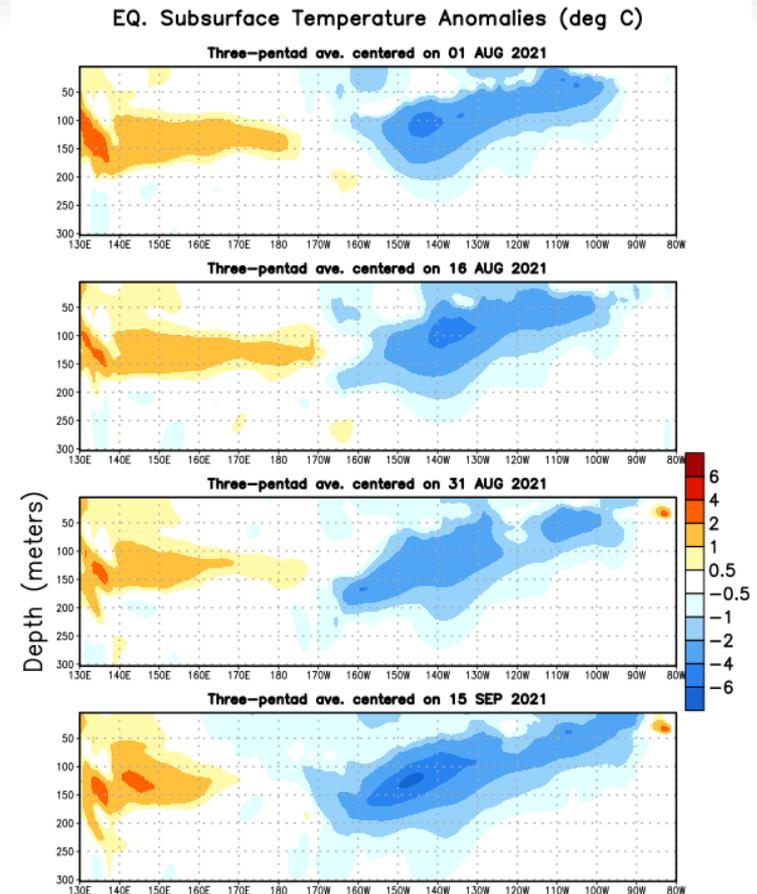

# Sub-Surface Temperature Departures in the Equatorial Pacific

In the last two months, negative subsurface anomalies have strengthened in the east-central Pacific Ocean.

Most recent pentad analysis

Positive subsurface temperature anomalies remain at depth in the western Pacific Ocean. In the last month, positive anomalies have also emerged near the surface in the far eastern Pacific Ocean.

# Historical El Niño and La Niña Episodes Based on the ONI computed using ERSST.v5

Recent Pacific warm (red) and cold (blue) periods based on a threshold of  $\pm 0.5$  °C for the Oceanic Niño Index (ONI) [3 month running mean of ERSST.v5 SST anomalies in the Niño 3.4 region (5N-5S, 120-170W)]. For historical purposes, periods of below and above normal SSTs are colored in blue and red when the threshold is met for a minimum of 5 consecutive over-lapping seasons.

The ONI is one measure of the El Niño-Southern Oscillation, and other indices can confirm whether features consistent with a coupled ocean-atmosphere phenomenon accompanied these periods. The complete table going back to DJF 1950 can be found [here](#).

**COMBINATION OF OUTPUTS FROM STEP 1 TO STEP 8 AND  
GENERATION OF THE CONTINENTAL SEASONAL CLIMATE  
FORECAST FOR SON, OND AND NDJ 2021/2022**

# SEASONAL PRECIPITATION OUTLOOK FOR OND 2021

*During the upcoming ASO season, dryer than average precipitation is expected along the coast of Nigeria, south of Cameroon, Equatorial Guinea and most of Gabon.*

*Whereas, wetter than average precipitation is expected over south-eastern Mauritania, southern and central Mali, Burkina Faso, Southern tip of Ivory Coast, Ghana, Togo and Benin, parts of Niger, north west border of Nigeria, north-east of South-Sudan, east of Sudan and western Ethiopia and south-west of Eritrea. Across the remaining parts of the continent, near average precipitation is predicted.*

# SEASONAL PRECIPITATION OUTLOOK FOR NDJ 2021-22

*During SON season, below average precipitation is very likely over most of Equatorial Guinea, southern fringe of Nigeria, Cameroon, and Gabon. During September to November 2021 normal to below precipitation is very likely over south east of Somalia, coast of Kenya and Tanzania.*

*Above average precipitation is very likely across the eastern portion of the continent including south-west of Eritrea, Western parts of Ethiopia, east of Sudan and north-east of South Sudan.*

## BRIEF FOR POLICY AND DECISION MAKERS BASED ON SIGNIFICANT WEATHER AND CLIMATE EVENTS UPDATE VALID FROM AUGUST TO NOVEMBER 2021

**Hazard**  
Mostly Near Average Precipitation is very likely and usually occurred adwers may take place.  
However, special extrem event is not expected

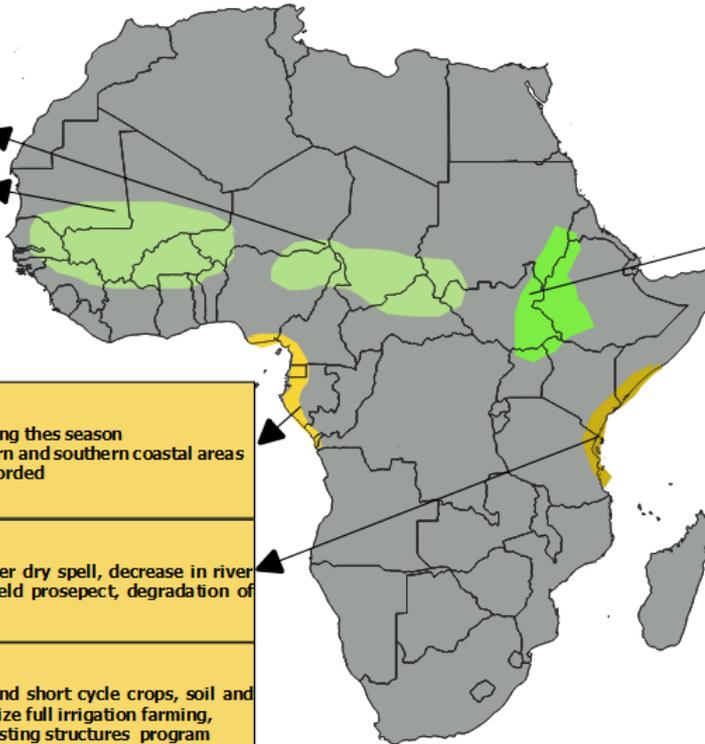

**POTENTIALS IMPACTS**  
Usually happend impact are expected

**MEASURES**  
Identify usually ocured climate events and conduct bussiness as usual activities

**HAZARDS**  
Dryer than average precipitation during this season  
Moderate drought over part of western and southern coastal areas  
Mostlt near average to late onset recorded

**POTENTIALS IMPACTS**  
Moisture stress, high chance of longer dry spell, decrease in river discharge, negative rain-fed crop yield prosepect, degradation of pasturre and rise in food prices

**MEASURES**  
Policy to support drought tolerant and short cycle crops, soil and water conservation practice, maximaize full irrigation farming, Watershed based ex-situ water harvesting structures program  
Policy in support of weather based insurance, dam mangment,

**HAZARDS**  
Wetter than average precipitation is very likely,  
High rate of rainfall events may lead to flash flood, river overflow, landslides and soil erosion.  
High chance of lightning, hail formation and stormy weather

**POTENTIALS IMPACTS**  
Waterlogging, pest and disease infestation,  
Outbreak of water borne diseases,  
damages to infrastructures (dams, reservoirs, bridges, roads...)  
Displacement of people due to flood

**MEASURES**  
Publicize the climate outlook and advisories, select excess moisture tolerant crops, wide tree planting campaign  
Develop new/rehabilitate the existing drainage structure,  
Update and implement flood contingency plans, better manage water in reservoirs and dams
