DEKADAL TECHNICAL NOTE FOR FIRST DEKAD OF JULY, 2022 AND PRECIPITATION FORECAST FOR WEEK 1 AND 2

Drafted and Presented by Hubert KABENGELA
Edited by: Sunshine GAMEDZE, Pierre KAMSU

Content of the Technical Note

1. **Monitoring Climate**

- forecast Verification
- MSLP obs and anom
- Geopotential height 500hpa obs and Anom
- Percent of precipitation
- Temporal variation of precipitation
- Start of Agriculture season and outlook
- Dekadal OLR anomaly
- Wind anomaly at 850 and 700 hPa
- Relative Humidity anomaly
- Weekly and monthly SST anomaly assessment

2. **Status of Drivers**

- Enso obs and forecast
- Current Velocity Potential at 200hPa
- Current MJO Status and Forecast
- Dekadal PWAT observed and outlook
- Dekadal velocity potential with MJO, Kelvin and Rossby Wave
- Dekadal Stream Function with MJO, Kelvin and Rossby Wave

3. **Dynamical Forecast Model Week 1 and 2**

- MSLP anomalies analysis GFS, BoM, ECMWF, UK met, DWD
- Weekly wind anomaly and divergent forecast 925, 850, 700, 500, 200
- Forecast Subseasonal drivers (NCEP, NCSU, UCSB, ECMWF and BoM) (East wave, Equatorial wave)
- Weekly NCEP/GFS bias corrected ensemble forecast
- GEFS weekly precip exceedance forecast
- Weekly Precip Forecast from ECMWF (Anom and Prob.)
- Monthly tercile prob precip anomaly forecast
- IRI SubX precip forecast

4. **Week 1 and 2 Outlook**

- Two week climatology
- Two weeks precip forecast

1. Climate Monitoring

- Forecast Verification
- Observed Mean Sea Level Pressure (MSLP) during last dekad
- Observed 500 hPa Geopotential Height during last dekad
- Observed Precipitation during last dekad
- Observed Temporal Variation of precipitation
- Start of Agricultural Season – Current Status and Outlook
- Observed OLR Anomalies during the passed dekad
- Observed Wind Anomaly at 850 and 700 hPa
- Observed Relative Humidity Anomaly
- Weekly and Monthly SST Anomaly Assessment

2. Status of Drivers

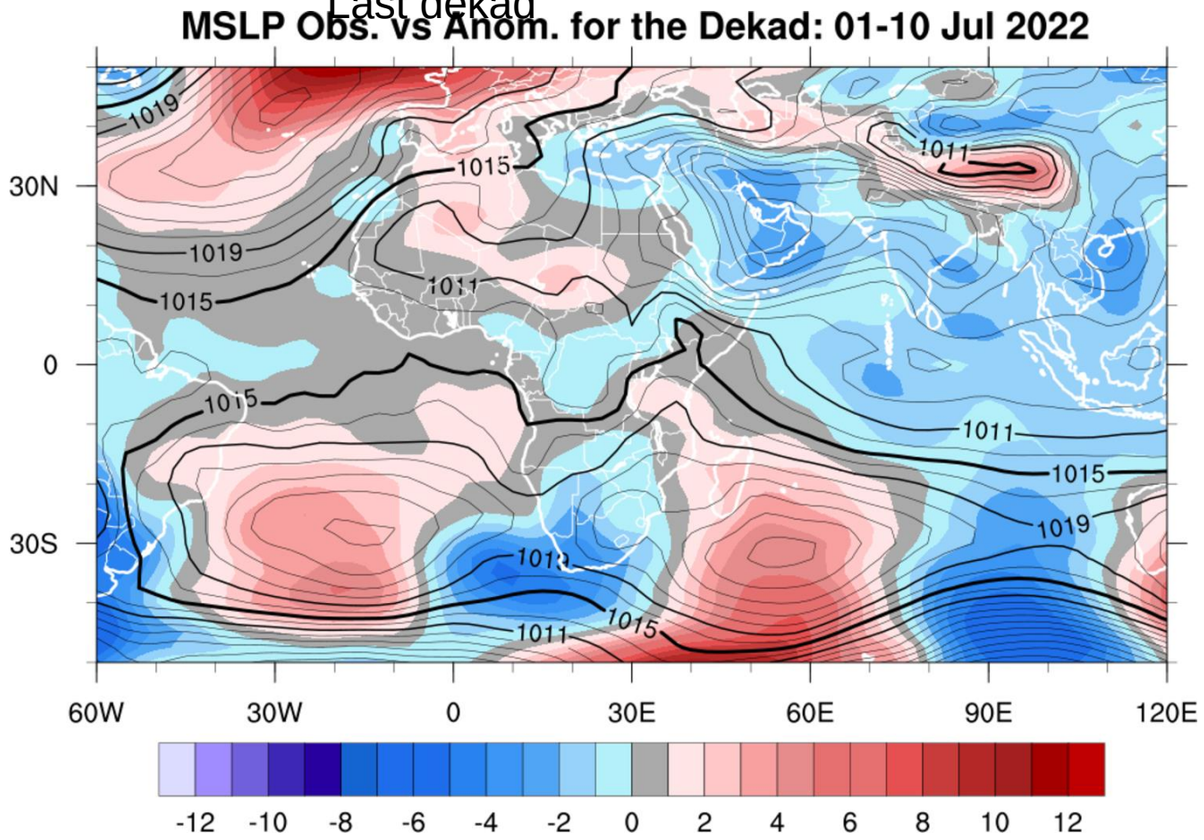

3. Dynamical Model Forecast : Week 1 and 2

4. Week 1 and 2 Outlook

Forecast Verification

Mean Sea Level Pressure (MSLP) – Obs & Anom.

Last dekad

Same dekad last year

1. Climate Monitoring
2. Status of Drivers
   - ENSO - Obs and Forecast
   - Current 200 hPa Velocity Potential
   - MJO – Current Status and Forecast
   - Weekly PWAT – Current Status and Forecast
   - Dekadal 200 hPa VP and Tropical waves
   - Dekadal Stream Function and Tropical Waves
3. Dynamical Model Forecast : Week 1 and 2
4. Week 1 and 2 Outlook

Niño Region SST Departures (ºC) Recent Evolution

The latest weekly SST departures are:

SST Departures (ºC) in the Tropical Pacific During the Last Four Weeks

In the last four weeks, equatorial SSTs were below average across most of the Pacific Ocean.

Weekly SST Departures during the Last Four Weeks

During the last 4 weeks, negative SST anomalies have weakened across most of the equatorial Pacific Ocean.

Change in Weekly SST Departures over the Last Four Weeks

During the last four weeks, mostly positive changes in equatorial SST anomalies were observed across the central and eastern Pacific Ocean.

Central and Eastern Pacific Upper-Ocean (0-300 m) Weekly Average Temperature Anomalies

From mid-March to early July 2021, subsurface temperature was above average. Negative temperature anomalies returned in July 2021 and persisted through mid-January 2022. During February through mid-March, subsurface temperature anomalies decreased. Since then, negative anomalies have gradually weakened and are now near zero.

Sub-Surface Temperature Departures in the Equatorial Pacific

During the last two months, negative subsurface temperature anomalies have weakened in the east-central equatorial Pacific Ocean.

Most recent pentad analysis

Positive subsurface temperature anomalies were mostly observed in the western and central Pacific, at depth, while negative anomalies prevailed near the surface in the central and eastern Pacific Ocean.
